

What deserves management attention first — and what must not be decided from this file alone.

One file, no bookings or revenue. The data can size exposure and prioritize triage, but availability and reviews are proxies. Do not use this file to declare occupancy, profitability, or illegality.

Median price: 331 · Mean: 418 · p95: 833 Median availability next 365d: 314 days Median reviews LTM: 7

Concentration: Top host 1.2% · Top 10 6.4% · Top 1% of hosts 29.3%

LICENSE FIELD BLANK
100% — 42,378
Every listing. Cannot judge compliance from this file.

HIGH AVAILABILITY + LOW REVIEWS
22.2% — 9,428
Availability ≥300 & reviews LTM ≤3 — largest triage pool

ZERO REVIEWS IN LAST 12 MONTHS
20.6% — 8,714
Includes new, dormant, and blocked-calendar listings

STALE / NO REVIEW SINCE 2025-08-22
21.7% — 9,190
Proxy for inactivity — requires date verification

1 — DECISIONS THIS FILE SUPPORTS NOW

Triage sizingPortfolio prioritizationData-gap remediation

DECISION	WHAT THE DATA PROVES	STATUS
Fix the license data source	42,378 blank (100%) — no compliance signal in this extract. Order authoritatively from registry before any action.	Decide now
Ring-fence the low-signal portfolio	9,428 listings meet the weak-demand proxy. Create a watched cohort for verification, not automatic delisting.	Decide now
Prioritize geography for review	Weak-demand concentration is highest in Vila Prudente (54.9% of 113) , Rio Pequeno (46.2%), Cidade Dutra (44.9%) — see chart.	Decide now
Add host-level portfolio review	Market is fragmented but top 1% of hosts hold 29.3%. Large portfolios magnify exposure; apply cohort controls.	Decide now
Quarantine 526 missing-price records	1.2% of file has no price — exclude from pricing actions until corrected.	Decide now

Why these are decisions, not hypotheses: each is defined entirely inside the file (counts, rates, field presence). No inference about guest nights or revenue is required.

2 — WARRANTS INVESTIGATION ONLY

SIGNAL	WHY IT IS ONLY A FLAG
Very high availability (median 314 days)	Calendar openness ≠ vacancy. May be blocked, seasonal, or misconfigured. Check booking system before action.
Low or zero reviews LTM	Reviews are a <i>proxy</i> for demand, not a count of stays. New listings naturally score low. Needs tenure data.
Stale last_review	21.7% have no review / none since Aug 2025. Could be dormancy, owner pause, or channel shift — verify activity.
Long minimum nights (1.6%, 668 listings)	Small separate segment. May be 30-day+ housing, not short-stay — analyze separately.
High prices (p95 ≥833, max 57k)	Right-tail only. Luxury vs. error cannot be distinguished without description / type validation.
Large-operator patterns	High-listing hosts show varied review levels — worth portfolio audit, not host-level sanction on this evidence.

Operating rule: treat all six as *triage lists* that authorize investigation. None alone justifies delisting, repricing, or compliance action.

3 — SCALE AT A GLANCE

Each bar = share of the full 42,378 listings. License gap is a file property; the others are investigation triggers.

Where the weak-demand proxy concentrates (≥ 100 listings)

Weak-demand proxy = availability ≥ 300 & reviews LTM ≤ 3 . Sorted ascending; Vila Prudente is the highest concentration among ≥ 100 -listing areas.

EVIDENCE GAPS — WHAT THIS FILE CANNOT TELL YOU

- **No occupancy or nights booked** — availability_365 is forward calendar, not utilization.
- **No revenue, cost, or profit** — price is a listed rate, not realized ADR.
- **No legality determination** — license column is entirely empty; cannot assess compliance.
- **No demand channel** — reviews proxy demand but bookings may occur off-platform.
- **No listing age** — zero-review listings may be new rather than failing.
- **No quality signal** — ratings, cancellations, photo/completeness scores absent.

To answer occupancy / profitability / illegality, join: booking nights, realized revenue, license registry, listing creation date, cancellation & rating feeds, and channel attribution — then re-run the triage cohort.

RECOMMENDED SEQUENCE & CAVEATS

Next 2 weeks — remediate

- Reconcile license extract against authoritative registry
- Correct / re-source 526 missing prices; quarantine from pricing models
- Tag the 9,428 weak-demand proxy cohort as “verify, don’t act”

Next 30 days — investigate

- Sample Vila Prudente / Rio Pequeno / Cidade Dutra for ground truth
- Portfolio audits on top 1% of hosts (29.3% of supply)
- Join bookings to validate availability vs. true vacancy

Caveat to state in the meeting: every percentage and ranking in this briefing is *descriptive of the file*. It sizes where to look and what to verify — it does not prove a listing is empty, unprofitable, or non-compliant.
